

NIGHT-FIGHTER® EMERGENCY WORK LIGHT

*Night-Fighter® model FL3SF-LC
shown with FL3TK-1 mount.*

For emergency illumination, the Night-Fighter® work light has the features you need. The Night-Fighter is an integrated three-lamp area light with spot and flood light capability. A single, watertight switch activates the spot light or the flood light function.

Maneuvering the Night-Fighter is easy. The entire unit can be hand-swiveled 360° horizontally, 90° upward, and 60° downward, and can be locked into position.

The latest versions, **FL3SF-LC** and **FL3SF-R-LC**, offer the same style and features of the original models but with a significant reduction in current draw. Model **FL3SF-R-LC** includes a remote switch and a 5' coil cord. The remote switch can be installed on the pump panel for an alternate means of activating the unit.

Both low-current Night-Fighter models use an incandescent lamp in the center and 80-watt halogen lamps in the two outer modules. Each incandescent bulb houses an extra filament that illuminates when the Night-Fighter is in the spot light mode. This extra filament creates a "spot" of increased light output directed to the center of the illuminated area.

Each halogen lamp can provide up to 100 hours of service life. The entire Night-Fighter unit has a polished stainless steel housing that complements fire apparatus.

For additional capability, order the telescopic mount, model **FL3TK-1**, which can extend up to four feet.

QUICK REFERENCE

FEATURES

- Powerful, effective three-lamp unit.
- Spot and flood capability.
- Stainless steel housing assembly.
- Easily adjusted.
- Remote activation switch.
- Telescopic mount available.

APPLICATIONS

- Emergency high-rise or ground-level illumination
- Work area lighting for fire apparatus
